Art Unit: 1714

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 2-5 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-5 of U.S. Patent No. 6,639,012. Although the conflicting claims are not identical, they are not patentably distinct from each other because the flow aid of claim 2 encompasses a liquid component not being water and because the core/shell polymer would have different composition due to the different reactivity of allyl methacrylate and butyl acrylate of the examples.

Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 3 reciting "at least 5 weight percent of water" encompassing 100% of water for the liquid is confusing since it improperly broadens the scope of the claim 4 wherein "essentially no water" is recited and the examiner interprets said "essentially no water" being close to free of water.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kemp (US 4,250,070) and Espiard et al (US 6,245,848) teach the instant bimodal polymeric systems, but polymeric particles would have the same composition, PVC.

Process claims 6-10 are allowed.
